

# COMPOSITE GARDEN SHEDS

If you're running out of space and finding it difficult to store your valuable possessions safely and securely the best solution is a fully insulated and secure composite garden shed.

You can easily store: Lawnmowers and gardening tools, power tools, exercise equipment, children's toys, garden furniture and cushions (without going mouldy!) BBQ's, sports gear, camping gear, golfing equipment, audio equipment for parties and anything else which is valuable and taking space up in the garage or house.

Our premium quality fully insulated composite garden sheds offer a secure, damp and moist free outdoor storage space for your valuable possessions.

Store your expensive lawnmowers, bicycles, electric cycles, motorcycles, garden and DIY tools without worrying about deterioration, rot, rust or easy theft.

Choose from a variety of different sizes external clad in a choice of either Fibre Cement, Smooth, Woodgrain or Slatted Composite Wood external cladding.

All our prices include delivery and complete on site installation by fully trained professional installation teams.

Each fully insulated secure composite garden shed is installed with the minimal of disruption, typically within 1-3 working days and without the need for planning permission.

For total peace of mind our high quality fully insulated composite garden sheds are covered by a 5 year structural guarantee.

## COMPOSITE GARDEN SHEDs - CONTINUED

### **Anthracite (dark grey) Single PVCu Door**

Each composite garden shed is supplied with a single anthracite (dark grey) PVC-U high security entry door. The high quality anthracite profiles blend perfectly with any of the different external composite cladding options. The glass section used in the garden shed PCV-U door are A rated tinted Planitherm argon gas filled double glazed units.

### **Insurance Approved Locks**

Our individual aluminium reinforced PVCu single entry door is fitted with an insurance approved locking mechanism. This locking system offers a higher level of security than the standard five lever mortice deadlock, as it bolts the door into the door frame and has multiple locking points around the door section.

### **Timber Frame Construction**

All our composite clad garden sheds are manufactured using traditional timber framed walls and floor. The walls are constructed using heavy duty solid 75mm timber and the floors are constructed from 100mm timber. The floor timbers are pressure treated and impregnated with Tanelith E wood preservative. The internal timber floor is covered using an 18mm industrial grade moisture resistant timber boarding. Inside you will find all the walls lined with 11mm OSB timber. Oriented strand board (OSB) is an engineered timber board which has superior strength than plywood.

### **High Performance Breathable Membrane**

The garden shed timber walls are wrapped in a specialist high performance waterproof breathing membrane. This membrane acts like a one way valve and allows natural moisture to escape out of the garden shed - but prevents moisture from entering the building. Our garden shed structures additionally incorporate double vented timber walls allowing air to circulate, enabling the structure to breathe.

### **Fully Insulated Roof, Walls And Floor**

The structural timber floor and wall sections contain 50mm Knauf RS45 thermal acoustic insulation. Knauf is one of the UKs market leaders in insulation and its products are the most thermally efficient and technically advanced insulation products available today. Our roofs are constructed using a 40mm profiled fully insulated trapezoidal roof panel. These insulated interlocking roof panels are supplied Anthracite (dark grey) on the outside and white on the inside.

### **Choice Of External Claddings Including:**

#### **Fibre Cement Boarding**

Fibre cement boards are a high-quality, low-maintenance and water-resistant cladding solution that have been manufactured to withstand harsh weather conditions with little expansion or contraction. Fibre cement boards are not susceptible to rot, mould or pests, and do not require staining or treatment. Available in eight colours: Cream, Sage Green, Slate, Granite, Light Grey, Black, Blue, and White.

#### **Smooth Composite Cladding**

Manufactured using a combination of 60% recycled hardwood fibres and 40% recycled plastic, our smooth composite cladding is zero maintenance and insect and rot resistant. Unlike traditional timber cladding, our smooth composite cladding does not require staining, varnishing or sanding throughout its lifespan. Available in eight colours: Redwood, Olive Green, Ivory, Teak, Coffee, Charcoal, Light Grey and Stone Grey.

#### **Woodgrain Composite Cladding**

Woodgrain composite cladding allow you to effortlessly achieve a wood cladding look on your exterior garden shed walls. The woodgrain texture gives a natural wood effect. Again manufactured using a combination of 60% recycled hardwood fibres and 40% recycled plastic, our woodgrain composite cladding is zero maintenance and insect and rot resistant. Unlike traditional timber cladding, our woodgrain composite cladding does not require staining, varnishing or sanding throughout its lifespan. Available in eight colours: Redwood, Olive Green, Ivory, Teak, Coffee, Charcoal, Light Grey and Stone Grey.

#### **Slatted Composite Cladding**

Composite slatted cladding is manufactured from an innovative capped composite material that is environmentally friendly, Slatted Panels replicate the look of individual timber slats. Sometimes referred to as Shadow Gap Cladding, Slatted Cladding Panels can be installed either horizontally or vertically and create a stunning exterior look for garden shed. Available in a range of six colours - Walnut, Teak, Stone Grey, Coffee, Charcoal and Silver Grey.

### **Delivery & On-Site Installation**

All our prices include UK mainland delivery and complete on-site construction by fully trained professional installation teams.

### **Site Area**

In order for us to construct your new composite garden shed on site we need the construction area to be clear of any old buildings or sheds, trees, rocks and shrubs etc. The ground on which the garden shed is to be built must be relatively level and solid.- ideally timber decking, concrete or patio base. If the site area is not solid or entirely level we can offer a concrete pile foundation base system for the composite shed base at an additional cost - please contact us for pricing.
